About the Company

Aurora Intelligence Labs is a fictional product company developing enterprise AI platforms, intelligent automation solutions, and cloud-native data products. This document is intended only as a realistic sample for demonstrations and academic projects.

Role Overview

You will design and develop scalable backend services, LLM-powered applications, Retrieval-Augmented Generation (RAG) pipelines, AI agents, and data-driven software for enterprise customers.

Key Responsibilities

- Develop Python services using FastAPI.
- Build REST APIs and microservices.
- Implement RAG pipelines using vector databases.
- Integrate LLM APIs.
- Work with SQL/NoSQL databases.
- Write unit tests and technical documentation.
- Participate in Agile ceremonies and code reviews.

Required Qualifications

- B.E./B.Tech in CSE, IT, AI, Data Science or related discipline.
- Strong Python programming.
- DSA fundamentals.
- SQL and database design.
- OOP, Git and Linux.
- Excellent analytical and communication skills.

Preferred Skills

- LangChain / LangGraph / CrewAI
- ChromaDB, Pinecone or Weaviate
- Docker & Kubernetes basics
- AWS or Azure fundamentals
- CI/CD and GitHub Actions

Selection Process

1. Resume Screening
2. Online Coding Assessment
3. Technical Interview I
4. Technical Interview II
5. HR Discussion

Employee Benefits

- Medical Insurance
- Learning & Certification Budget
- Flexible Working Hours
- Annual Performance Bonus
- Wellness Programs

Application Instructions

Submit resume in PDF format along with GitHub and LinkedIn profile links. Shortlisted candidates will receive an assessment invitation via email.
